Research and Startup

Prof. Dr. Dirk Riehle

Friedrich-Alexander University Erlangen-Nürnberg
COSS D02

Agenda

1. Research vs. startup
2. Project management
3. Lead programming
4. Open source strategy
5. Getting users
6. Getting contributions
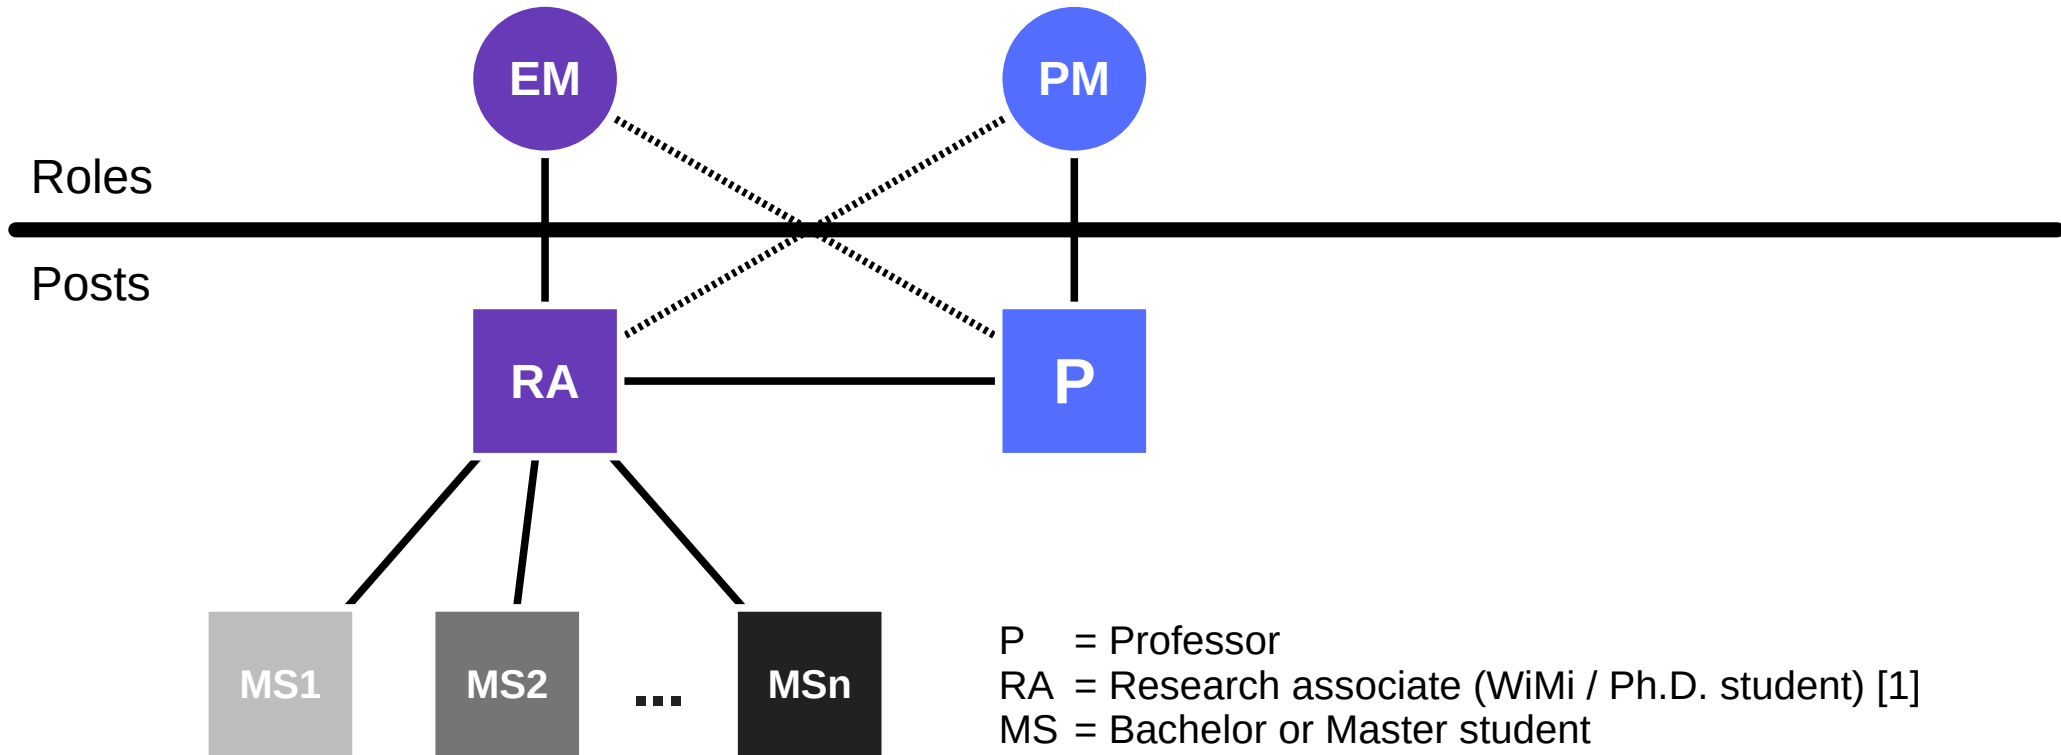

1. Research vs. Startup

Goal Conflict

- Research
  - Desired output
    - Research papers
    - A dissertation

- Startup
  - Desired output
    - Software product
    - A startup

2. Project Management

The Solo Founder Model

Roles

Posts

P = Professor
RA = Research associate (WiMi / Ph.D. student) [1]
MS = Bachelor or Master student

[1] The research fellow / Ph.D. student acts as "lead programmer"

The Peer Group Model

P = Professor
RA = Research associate (WiMi / Ph.D. student)
MS = Bachelor or Master student
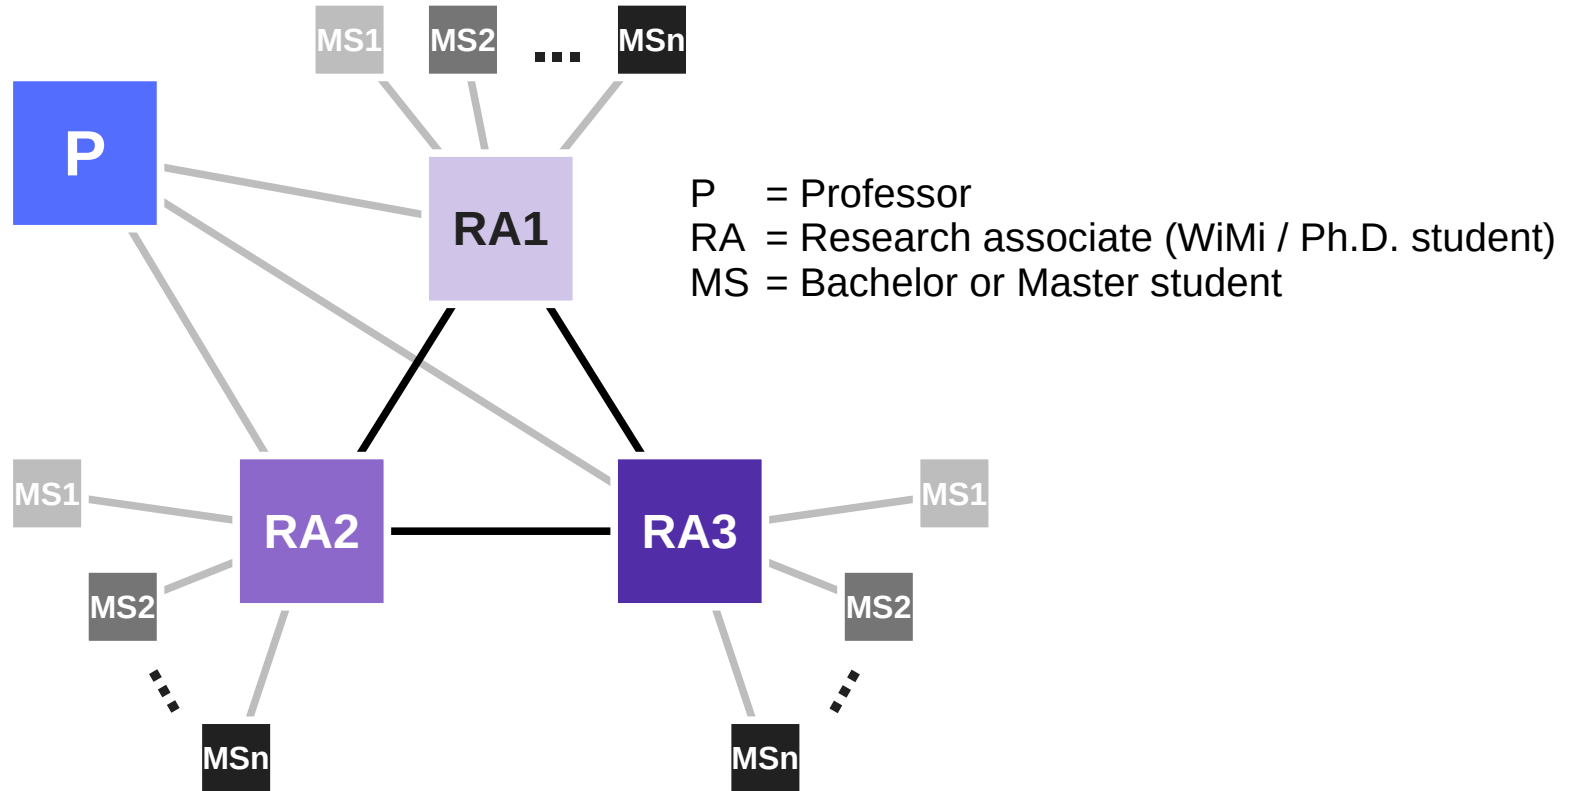

Project Recruiting

- Research associates
  - Recruited by professor
  - Funded through research grants, self-funded

- Bachelor or Masters students
  - Recruited by research associate with support by professor
 - Funded through research grants, self-funded

Project End

- Research project finished
- Startup created (or failed)

3. Lead Programming

Lead Programmer [1]

- A lead programmer
  - Is an engineer who leads the development of a component / system
    - In case of solo founder: The system
    - In case of peer group: A key component

  - W.r.t. the component, is responsible for maintaining
    - Product vision and getting the features done
    - Architectural integrity and code quality

  - Manages other people as they contribute to the component
    - In the beginning, they write most of the code themselves
    - Later, they review and integrate code more than they write

- Other / helper engineers are
  - Students at the university (e.g. Master's students)
  - Open source volunteers
[1]   A pun on Mills' "chief programmer teams"

Lead Programmer / Student Engineer Collaboration

- Lead programmer (research associate) defines feature
    - If necessary breaks it down into tasks
    - Assigns tasks or waits for volunteers

- With student engineer, discusses design and implementation
    - Helps break down work into tasks / increments
    - Ideally, discussion is public (in open source anyway)

- In multiple increments, reviews and merges code
    - Student engineer provides sufficiently small commit
    - Lead programmer reviews, comments, integrates

- Until feature is fully implemented

remove URL.js from project
Overview 8 | Commits 3 | Pipelines 3 | Changes 12

2 unresolved threads | ▾

We use URL.js to extract query params from urls.

The minified version of URL.js makes up 0.6% (28.44 kB) of our bundle which isn't justified considering its small usecase and the fact that we can fall back to URLSearchParams.

URIjs • 28.46 KB • 0.6%
URI.min.js • 28.44 KB • 0.6%

We only use a subset of the functions provided by URL.js but it can't be treeshaked by webpack because it's a non-module javascript file and just adds functions and variables to the global namespace.

Thread Resolution

Oscar Rosner 🕊️ @kexplx started a thread on the diff 1 day ago
Last updated by Oscar Rosner 20 hours ago

⌃ Toggle thread

⚛️ **war/assets/js/pages/ExercisePage/ExercisePage.jsx** 📋

```
5    5
6    6        import ExerciseEndpoint from '../../common/endpoints/ExerciseEndpoint';
7    7        import CourseEndpoint from '../../common/endpoints/CourseEndpoint';
     8   -    import 'script-loader!../../../../components/URIjs/URI.min.js';
```

Oscar Rosner 🕊️ @kexplx · 1 day ago   `Developer` ✅ 😊 ✏️ ⋮

An upcoming MR will remove the deprecated and unmaintained `script-loader` so this MR is a nice start.

Andreas Kaufmann @kaufmann_osr · 20 hours ago   `Owner` 😊 ✏️ ⋮

I believe since we have started using it, webpack have added better native support for importing assets as asset modules (came with v4 I think), is that the replacement for this type of loader?

Oscar Rosner 🕊️ @kexplx · 20 hours ago   `Developer` 😊 ✏️ ⋮

Script Loaders GitHub says to use `raw-loader` but i think there is another more webpacky option yes.

Other Considerations

- Single (mono) repository vs. many
- Main-line vs. feature branches

4. Open Source Strategy

Open Source Community vs. University / Company

Pulling in Features
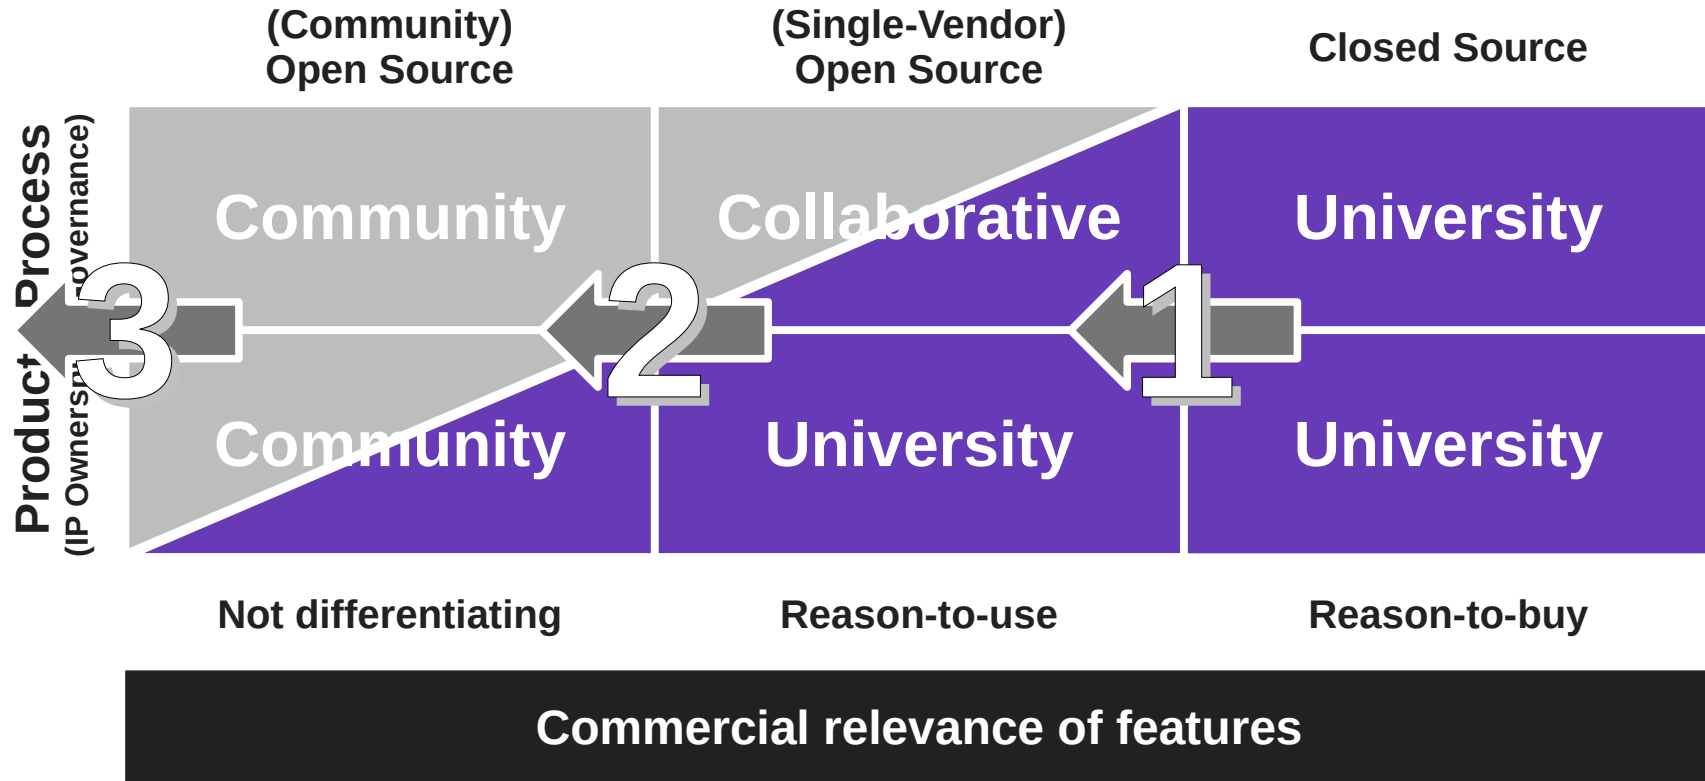

Commercial relevance of features
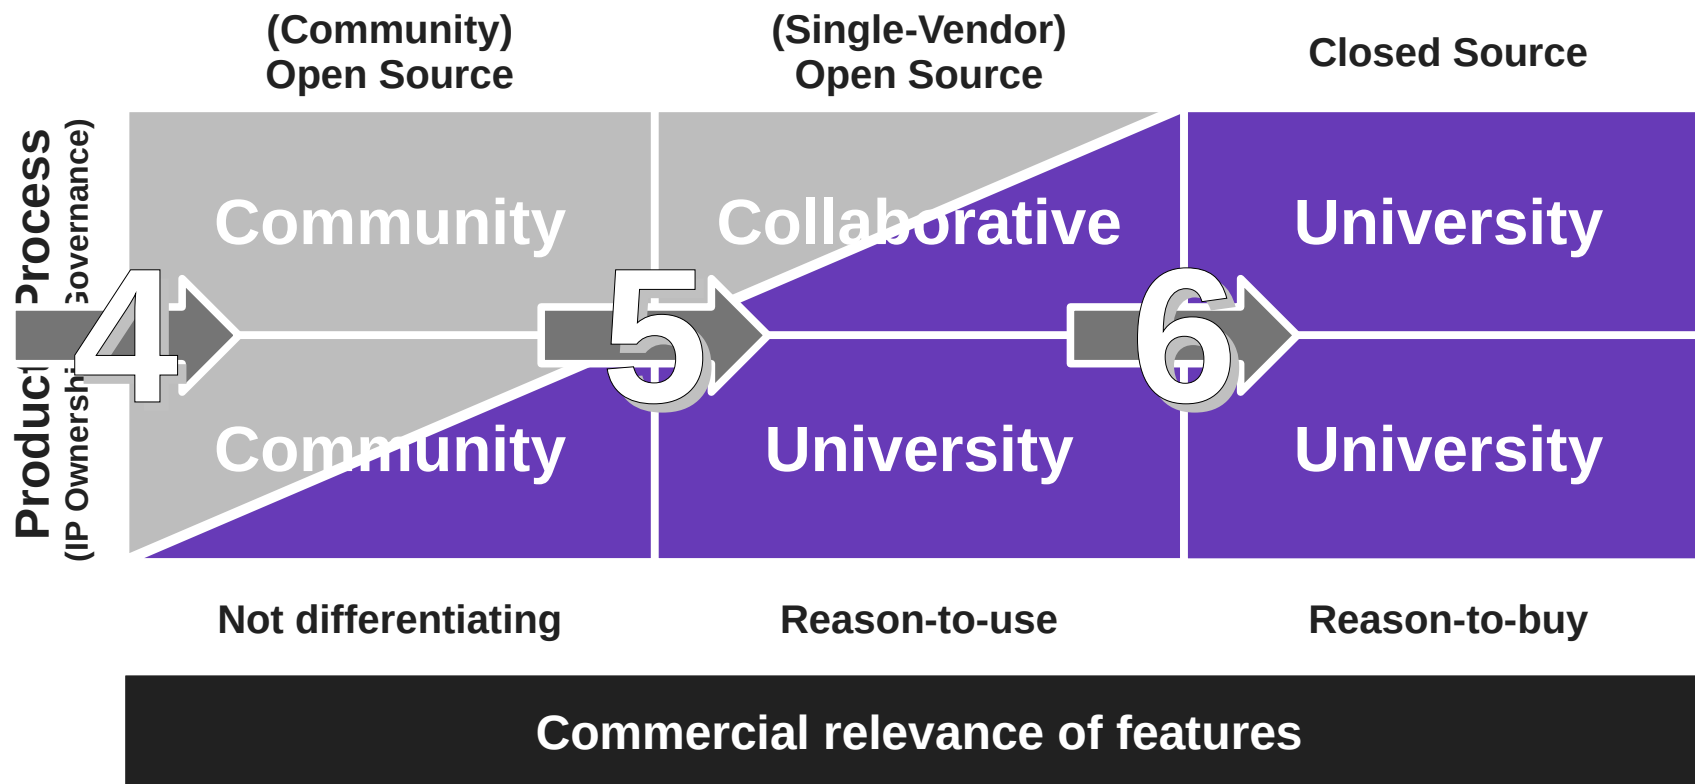

Public Money, Public Code?

- Universities have both a non-profit and commercial part
  - Universities are tasked with research and teaching, among others
  - Universities are also tasked with exploiting their innovations

- It is the university's choice what to give away for free

5. Getting Users

1.4.1 Provide announcements channel — **1.4 Stay in touch**

1.3.1 Define use cases
1.3.2 Provide live demo system
1.3.3 Provide readily usable binary — **1.3 Make use easy**
1.3.4 Follow established practices
1.3.5 Provide user documentation

1. Get Used!

1.1 Get found
- 1.1.1 Have good name
- 1.1.2 Have one defined place
- 1.1.3 Have good project page
- 1.1.4 Register in relevant places

1.2 Inspire trust
- 1.2.1 Provide all relevant information
  - Provide license
  - Provide project summary
  - Provide public roadmap
- 1.2.2 Practice open communication
  - Communicate publicly
  - Communicate in written form
  - Communicate completely
  - Archive all communication
- 1.2.3 Explain sensitive topics
- 1.2.4 Be matter-of-fact

6. Getting Contributions

Best Practices for Getting Contributions [R20]

2.7.1 Require DCO
2.7.2 Require CLA
2.7 Protect intellectual property

Welcome everyone
Decide based on merits
Allow for self-organization
2.6.1 Practice open collaboration

2.6.2 Manage all work publicly
2.6 Build trust
2.6.3 Track and give credit
2.6.4 Celebrate small successes

2.5.1 React speedily
2.5.2 Turn contributions into conversations
2.5 Engage contributors
2.5.3 Have public discussion channels
2.5.4 Understand contributor needs

2. Get contributions!

2.1 Say welcome!

2.2.1 Provide good first issue
2.2.2 Provide contribution guide
2.2 Make contributing easy
2.2.3 Provide tasks for everyone
2.2.4 Provide developer manual

2.3.1 Assume good faith
2.3.2 Speak to the issue, not the person
2.3 Communicate effectively
2.3.3 Praise plentifully, criticize specifically

2.4 Practice code review

Summary

1. Research vs. startup
2. Project management
3. Lead programming
4. Open source strategy
5. Getting users
6. Getting contributions
